Translation & congress equipment

### The service

Venue Audio Visual have many years of experience in delivering the right solution at the right time and at the right price. Our experienced team are able to tailor the right package to meet your requirements. From a single language, consecutive translation to multi-lingual simultaneous translation we are able to look after your requirements.

### Consecutive translation

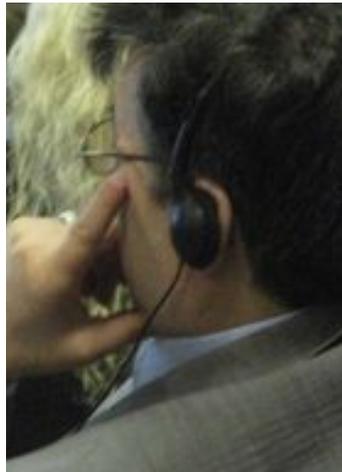

Best suited to smaller groups, consecutive translation offers a cost effective solution to the language barrier. Your presenter will speak and then pause while your interpreter repeats the sentence.

This service is usually delivered from a small sound system with microphones or a round table congress system with headphones.

### Simultaneous translation

For larger groups and conferences. Your interpreters will provide a seamless interpretation without pause from the presenter, this allows for an uninterrupted presentation.

This service is delivered via an infra red system to the delegates. Each delegate is issued with a receiver and headphones allowing for language selection for multi-lingual requirements. The translators are then housed in sound reducing booths, usually within sight of the presenter. Each booth will house two interpreters and a system for them to take the interpretation in turns. If more than one language is required additional booths are used.

### Dual projection

Groups of mixed language may require slides written in more than one language. Our solution to this problem is to place projection images side by side in different languages. Our dual slide advancer will switch two (or more) laptops simultaneously. Additional monitors can be placed in the translation booths for the interpreters to have a good view of the presentations.

### Push to talk (PTT) Congress systems

The PTT system can be used as a stand alone system for large, round table groups and is ideal for large boardroom meetings or public meetings such as public inquiries. Each base unit has an inbuilt speaker and does not require a PA system for the delegates around the table however the system can be used in conjunction with a PA for public galleries etc.

The PTT system can also be used in conjunction with our translation system and can be configured in several different ways.

Additional uses for the system are for recording or even in conjunction with a telephone system.

Venue AV offer a wide range of audio visual and conference equipment for hire.  
Conferences - Meetings - Events  
Equipment - Technicians - AV Management
